

## FINEMORES STORAGE CIVIL & PAVEMENT WORKS

Finemores Vehicle Transport

Culverston Road, Minto N.S.W.

With a site area of 26.4 hectares (264,000m<sup>2</sup>), this project provided an opportunity to carry out large-scale, heavy civil engineering works.

The works involved clearing the site, installation of underground services, some 110,000m<sup>2</sup> of light duty pavement construction and 45,000m<sup>2</sup> of medium to heavy-duty pavements. The project also required rectification of major subgrade problems with over 15,000 cubic metres of material having to be excavated and re-compacted on site.

Due to tight program constraints, Hannas operated seven days a week to ensure trade interfaces were met. The original works, along with the extensive remedial works, were completed on schedule, with the progressive hand-over of the site to the client meeting original targets.
